ABSTRACT

This annual report shows student transiency and stability rates for the 1989-90 school year in the Los Angeles Unified School District (LAUSD). Transiency refers to the number of students who enter and leave a school during the year, expressed as a percentage. Stability refers to the number of students who remained in a school all year, expressed as a percentage of the starting enrollment. The formula for computing transiency and stability rates for 1987-88, 1988-89, and 1989-90 includes all interstate transfers, whereas earlier reports do not; therefore, the rates for those three years are comparable with each other, but not with the rates reported in previous years. Information was gathered for all regular, magnet, and special education schools. Rankings were computed for each group, with a summary for the district. The following findings are presented: (1) schools of choice (magnet schools and centers) had the highest stability and the lowest transiency rates; (2) regular senior high school students were more transient and less stable than the average LAUSD student; and (3) compared to the previous year, district stability and transiency remained fairly stable. Statistical data are presented in ten tables. (FMW)

Abstract

This transiency and stability report for the Los Angeles Unified School District, 1989-90, continues the series that has been published annually for over 2 decades.

Transiency refers to the number of students who enter and leave during the school year, and is expressed as a percentage (rate). Stability refers to the student population that has remained in the school all year, and is expressed as a percentage (rate) of the starting enrollment.

The formula used for computing transiency and stability rates since 1987-88 includes interstate transfers whereas formulas for earlier years do not; therefore, the rates for the last 3 years are comparable, but not before.

Information has again been gathered from all regular, magnet, and special education schools. Rankings were computed for each group with a district summary.

The data suggest that schools of choice (magnet schools and centers) had the highest stability and lowest transiency rates. Conversely, students in senior high schools were more transient and less stable than the average LAUSD student. Compared to last year, district stability and transiency remained fairly stable.

Background and Introduction

Beginning in 1968-69, the Program Evaluation and Assessment Branch (formerly, Research and Evaluation Branch) has published an annual report on student transiency and stability relative to school enrollment.

Because transiency and stability are not reciprocal concepts, the sum of their rates is not required to equal 100%. Each concept is computed separately, although some counts of students are common to both formulas.

For the 7th year, the stability formula does not count leavers in the 1st school month, nor graduates advancing from one grade to the next.

The formula for computing transiency and stability was revised in 1987-88 to include interstate transfers. Therefore, the transiency and stability rates for 1989-90 can only be compared to 1987-88 and 1988-89.

It is important to note that fluctuations in annual transiency and stability rates reflect more than ordinary entering and leaving. For example, in recent years, changes in attendance patterns may have resulted from new magnet programs or reconfigured grades. Therefore, small shifts in the rates for individual schools may be responding to extraneous factors. Large group data, such as regional or district totals, may reflect the most accurate and balanced index of transiency and stability.

In the present report, magnet programs include schools and centers as well as alternative schools. Year-round schools are again listed with the regular schools.

Transiency and stability rates for special education schools appear in this report for the 4th year, at the request of the division office. Because special education schools have different attendance patterns than the majority of schools, they do not appear in district totals. Carlson Hospital has an unusual pattern of entrants and leavers; therefore, its counts are not included in the special education summary.

Data for continuation and opportunity high schools, alternative education and work centers, community adult schools, skills centers, and children's centers are not collected for this report because of either atypical patterns of entering and leaving or duplication of student counts.

Definitions

Entrants (E) in this report are students entering during the school year, with the exception of those returning to the same school at the beginning of the school year (E1).

Categories of entering students included in this study are:

- E2 entering from another school within LAUSD
- E3 entering from another California public school outside LAUSD
- E4 entering from a nonpublic school in California
- E5 entering from a school in another state or country
- E7 enrolling for the first time (generally kindergarten or 1st grade)

Leavers (L) in this study are students leaving any time during the school year, except those graduating (L7) and those leaving one grade or program to enter another in the same school (L1).

Categories of leaving students included in this report are:

- L2 leaving for another LAUSD school
- L3 leaving for another California public school outside LAUSD
- L4 leaving for a nonpublic school in California
- L5 leaving for a school in another state or country
- L8 leaving without giving the school enough information about destination or reasons; thus, categorized as unknown, dropped, or other

Magnet schools or programs: see Schools of Choice.

Rank refers to ordering the transiency and stability rates for schools or groups of schools listed in Tables 1 through 6, with the highest rate receiving rank 1. Thus, rank 1 for stability indicates greatest holding strength, but rank 1 for transiency indicates the highest mobility. Each table contains unique rankings within its pattern that cannot be directly compared to other years' rankings. Table 1 gives region and division rankings.

Rate refers to the percentage term calculated by the formulas for stability and transiency. A school with a high stability rate and a low transiency rate has excellent holding power.

School Month refers to a period of 4 weeks or 20 school days. There are 10 school months in 1 school year, usually covering about 9 calendar months.

School Year: see School Month.

Schools of Choice or magnet programs are part of the district's voluntary integration program. Magnet schools and centers (including four alternative schools) are available to LAUSD students, grades K-12, by application. A program may include the entire student body or selected grades. Each program emphasizes a particular field of interest such as science, performing and fine arts, or business. Gifted and high-achieving students study in programs that emphasize accelerated learning and creativity.

Stability estimates the student population that has remained in the school all year. It is computed by subtracting all school-year leavers from the starting enrollment, and is expressed as a percentage (rate) of the starting enrollment. See Formulas.

Transiency refers to the adjusted number of entrants and leavers for the year. It is expressed as a percentage (rate) of the 10-month enrollments averaged. See Formulas.

Formulas

The formulas for stability and transiency are explained as follows:

Symbols Used

- AVG average enrollment of 10 school months (i.e., sum of enrollment of month 1, month 2, ...month 10, divided by 10)
- E adjusted number of entrants for the school year: this includes all E2, E3, E4, E5, and E7 students for school months 2-10; excludes all Es in month 1; excludes all E1 students for months 2-10
- L adjusted number of leavers for the school year: this includes all L2, L3, L4, L5, and L8 students for school months 2-10; excludes all Ls in month 1; excludes all L1 students for months 2-10
- M1 enrollment for school month 1
- S stability rate for school year
- T transiency rate for school year

Formula for Stability

Stability equals enrollment for school month 1 less adjusted number of leavers divided by enrollment for school month 1, times 100--yielding a percentage term, the stability rate.

$$S = \frac{M1 - L}{M1} \times 100$$

Formula for Transiency

Transiency equals adjusted number of entrants plus adjusted number of leavers divided by the average enrollment for the 10 school months, times 100--yielding a percentage term, the transiency rate.

$$T = \frac{E + L}{AVG} \times 100$$

Notes about the formulas:

- All Es and Ls in school month 1 are excluded from consideration as separate categories because they are already represented in the M1 baseline enrollment.
- "Adjusted number" refers to the inclusion or exclusion of types of E and L students, listed under Symbols Used.
- Es include the E5 category.
- Ls include the L5 category.
- S cannot be calculated if $M1 = 0$. No stability rate will appear, and a starred footnote will explain: "Value cannot be calculated because denominator = 0."
- S cannot be validly calculated when $M1 < L$. No stability rate will appear, and a starred footnote will explain: "Value was less than zero." This condition is possible for a school with an unusual pattern of entrants and leavers. The school may offer highly specialized services to enrolees. Students begin their school year elsewhere but, after their exceptional needs have been identified, transfer to the special school. If

the services are short-term, many students will rotate through the program during the year and return to their home schools.

Thus, the special school's opening M1 enrollment can be zero or extremely low relative to unduplicated counts of entrants and leavers later in the year. By program default, the last rank available within the school group is assigned to the "M1 < L" school. See Carlton Hospital or Junior High (JH) Assistance Program.

Using the Tables

Overview results for the district appear in Table 1, and results for elementary schools, junior high schools, senior high schools, schools of choice, and special education schools follow in Tables 2 through 6. The schools are listed in alphabetical order, with numeric schools first in the sequence.

For Tables 1 through 6, the headings are explained in the Definitions section of this report. Please note that entrants and leavers represent accumulated totals for the entire school year.

Summary rates for transiency and stability since 1968 are shown in Tables 7 through 10.

Findings

The schools of choice (magnet schools and centers) as a whole, and as subgroups in their region, show the highest stability and the lowest transiency of all school groupings (Table 1). Conversely, senior high schools recorded the (relatively) lowest stability rating and the highest transiency rate.

Due to changes in formula, 1989-1990 rates can be compared only to 1987-88 and 1988-89 (Table 10). Overall, district stability remained about the same over the last 3 years: 77.74%, 77.39%, and 76.94% respectively. District transiency increased from 1987-88 to 1988-89 (40.04% to 42.02%) but changed only slightly this year (42.57%).

Compared to last year, stability decreased slightly for elementary, senior high, schools of choice, and special education schools. Junior high schools increased slightly. Transiency increased slightly at all but junior high schools where it decreased, registering a small improvement.
